## Contents

<b>Aim</b>	<b>1</b>
<b>Theme</b>	<b>1</b>
<b>Codes</b>	<b>1</b>
<b>Tables</b>	<b>2</b>
<b>Plots</b>	<b>2</b>

This is my first markdown.

## Aim

In this project I am practicing R markdown features.

I would like to:

1. understand R markdown
2. learn new things
3. create a nice document

## Theme

To change the theme of the document I am using Prettydocs.

## Codes

I include a code chunk with a comment in it.

weight	Time	Chick	Diet
42	0	1	1
51	2	1	1
59	4	1	1
64	6	1	1
76	8	1	1

```
# I am the comment :D
```

I also say hello to the world with a `print()` and for that I am only showing the output of the code.

```
## [1] "Hello World!"
```

## Tables

With `kableExtra` I show the first 5 rows of the `ChickWeight` dataset. For this I will use the `kableExtra` package which I imported in a separate chunk.

For the table I used the classic style.

## Plots

I included one plot. It need to:

- be aligned to the center
- have a size of 70%
- hide the codes creating the plot
- hide warning message
